

**IMI's state of the art press processing technologies for the century**  
**~Quality that is not compromised in the least part~**

## Press processing

*The Company has been aggressive in adopting state of the art precision press processing technologies such as a progressive transfer robot and the press processing itself has become IMI Corporation's specialization as a core business expertise. IMI Corporation's advanced technologies can be best employed on special parts made of stainless steel or any other intricate parts where the characteristics of material and/or dimensions demand the most difficult press processing. They greatly contribute to the enhanced functionality of the end products in which our parts are used.*

**High technologies, sophisticated plant and equipment that can handle stainless steel or unusually shaped rotated parts.**
